

Kyocera Green Printing Range

Kyocera's worldwide corporate green policies encourage conservation and recycling in the business world, while at the same time its product range brings about technologies that minimise a business' impact on the environment. Due to its unique ECOSYS technology the printing range has achieved a significant reduction in the number of part replacements and disposable items – making it a logical solution for business printing. Printing costs are cut, and it's also good for the environment! Better yet, Kyocera also provides a calculator tool on its website so that business owners and managers can estimate their current printing costs and potential savings.

MAUS MasterPlan

The MAUS MasterPlan business planning software is the perfect tool for developing customised internal business and marketing plans to suit your business' individual needs. Reports created using the software can include all planning considerations, such as a full set of financials, actual versus budgeted comparisons and graphical analysis. Ideal for creating professional plans with minimum fuss, this software uses a simple question-and-answer format, complete with sample text to lead you through the entire planning process. Use this complete package to plan and control your business, increase sales and profitability, compare actual versus budgeted performance, improve your business and marketing skills, as well as generate new and innovative business ideas. This software package will soon become your 'go to' for business and direction planning.

Liquid Image Video Camera Goggles

A skiing or snowboarding holiday, whether it be for a weekend or a week, is a truly treasured experience. Now you can capture and remember your adventure away from the office with a pair of goggles fastened neatly to your helmet. The Liquid Image Summit Series video goggles allow you to record all the action on the slopes completely hands free. These clever goggles have a built-in camera that shoots both stills and video and records the world as you see it when you are soaring down the mountains. The next time you kill that black run or perfect a jump, the entire experience, just as you see it, will be captured on film. The goggles have a 135-degree wide-angle lens and the hands-free unit has a video mode that records HD720P video up to 30 frames-per-second, as well as an audio and 5MP camera mode. After your day (or better yet, your week) on the slopes, simply upload the images and footage to your computer and edit them as you please. Skiers and boarders have been known to use the footage to help improve their skills or even to study a run. The video camera goggles are not just a cool new gadget; used cleverly, they can improve performance.
