CASE STUDY

Significant savings to be made for WorkCover in printing costs with Kyocera Mita Managed Print Services (MPS)

BACKGROUND

WorkCoverSA manages the South Australian Workers Rehabilitation and Compensation Scheme, which provides protection to workers and employers in the event of workplace injury. WorkCoverSA has close to 300 staff working across nine floors and prior to arrangements with Kyocera Mita Managed Print Services (MPS), was equipped with a printer fleet that incorporated 12 Multifunction Devices (MFDs), standalone copiers and 40 printers. While the MFDs and copiers were maintained under a service contract, the printers had been purchased outright and demanded ongoing costs for toner and maintenance.

THE CHALLENGE

WorkCover's varied fleet of MFDs, copiers and printers, presented a series of operational challenges and with the MFD devices fast approaching end-of-life and the associated service contract due to expire, it was apparent that new devices would need to be purchased and deployed as replacements.

"One of the consequences of having such a diverse fleet of MFDs, copiers and printers was the burden of having to

purchase and manage 20 different types of toners, with two to three pieces each for buffering, in the inventory room," said Mr Chris Osborne, Manager ICT Operations WorkCover.

"This also meant that every time a toner needed to be replaced, people had to go from their respective floor to the inventory room. This, combined with manual ordering errors and poor toner management, sometimes resulted in a printer being down for days before the replacement toner was available and installed."

With the IT area responsible for managing printers and another area managing the MFDs, the existing set-up lacked efficiency and didn't allow for measuring or evaluating overall printing costs. When a preliminary Total Cost of Ownership (TCO) analysis was carried out for the printers, the cost was some 10 times the cost of the original printer hardware.

The escalating printing costs, along with the need to replace the ageing MFD fleet prompted WorkCover to turn their focus towards an overall printing solution that would enable a reduction in TCO.

CASE STUDY - WORKCOVER

“Working with Kyocera Mita has been a great experience. Not only do they understand our business and our goals, but have demonstrated they have the technology and the flexibility to build a quality solution to truly support our operations – now and into the future.”

WorkCover SA*

THE SOLUTION

Working with Kyocera Mita, WorkCover were able to update their MFDs and printers under a Managed Print Services (MPS) agreement, which would provide a single contract for ongoing maintenance (including toner management and servicing) on all its devices, and keep costs to a minimum. This arrangement would also help to ensure that the new printing operation had minimal environmental impact.

Under the five-year MPS agreement, Kyocera Mita replaced WorkCover’s ageing MFD and printer fleet with 10 sophisticated TASKalfa 500ci, KM-C4035e and KM4050 A3 colour MFDs and seven FS 1300DN and 23 FS 4000DN high-speed printers. Where possible, various side-by-side monochrome and colour printers were consolidated down into a single, high speed, colour printer for maximum efficiency and ease of operation.

Importantly, the agreement provided a single-vendor product solution that incorporated all devices and focused on delivering a much lower TCO by eliminating future overhead costs associated with extra toner requirements or device servicing.

“Kyocera Mita’s MPS proposition was an attractive solution because it offered a simple and streamlined solution that would enable us to reduce costs. Ultimately, we chose to work with Kyocera Mita because they are one of the very few vendors that can offer highly reliable MFDs and printers at the same time, along with their commitment to helping us create a more environmentally sound document management operation,” said Mr Osborne, Manager, ICT Operations, WorkCover SA.

Being based in South Australia, Kyocera Mita also worked closely with WorkCover’s IT area to set-up automatic meter reading and monthly usage analysis for their MFDs and printers. This meant WorkCover could begin to track and understand overall printing volumes and costs – organisation wide, by business area or by individual user. As part of the MPS solution, the IT area could also track its toner usage, knowing that once a toner gauge was low, a replacement would automatically be ordered and shipped to the exact location of the respective device, thereby minimising device downtime.

THE RESULT

The MPS solution was implemented at WorkCover on 12 May 2008 and since then there have been a number of positive outcomes.

It is estimated that WorkCover has reduced its overall printing costs by between 30 and 35 per cent. With more printing now being done in-house, made possible by the improved functionality of the new devices (including colour in A3 and more professional finishing options), the actual savings may even be greater over the long term. Greater visibility of overall printing volumes and decreased costs, through improved reporting capabilities, has empowered the IT area to make effective decisions more easily.

“In addition to our immediate cost savings and the impressive forecasted savings, the MPS solution has meant that we’ve reduced the number of service calls. Plus, while we previously faced service response times of four to six hours for MFDs and next business day for printers, we now have a service level agreement that sets the response time at less than four hours – and the Kyocera Mita technician is capable of looking after all our MFDs and printers in a single visit.” said Mr Osborne.

Since the new printing infrastructure has been implemented, WorkCover’s staff have also been able to better utilise their time, as rather than the administration area having to purchase and manage toner stocks, the process is now completely automated.

WorkCover has also been impressed by Kyocera Mita’s commitment to minimising e-waste and resulting landfill. The award winning cardboard-only package design for toner and devices has reduced the amount of waste that cannot be recycled. Looking forward, with Kyocera Mita’s long-life ECOSYS technology and recycling efforts, it is projected to help WorkCover to divert more print cartridges and drums away from landfill.

“Working with Kyocera Mita has been a great experience. Not only do they understand our business and our goals, but have demonstrated they have the technology and the flexibility to build a quality solution to truly support our operations – now and into the future.” concluded Mr Osborne.

CASE STUDY - WORKCOVER

CASE STUDY SNAPSHOT

THE CHALLENGE

- **Different printer models purchased at different times**
 - Purchased and managed 20 different types of printer toners
- **Inefficient way to manage printer toners**
 - High inventory cost to stock two to three bottles of each type of toner as a buffer
 - Manual order errors resulted in occasional long downtime for printers
- **Lack of efficiency to measure or evaluate overall printing costs**
 - Unknown printing costs for printers
- **High TCO for printers**
 - Printers with a TCO 10 times more expensive than original hardware for regular print volumes

THE SOLUTION

- **Single reliable source for MFDs, printers, service and support**
 - Sophisticated Kyocera Mita A3 color MFDs
 - Low TCO Kyocera Mita ECOSYS printers
 - Five year ongoing maintenance contract for MFDs and printers
 - Single source direct helpdesk support
- **Effectively manage MFD and printer toners**
 - Accurate automatic toner ordering and delivery system
 - Toners delivered straight to the exact location instead of inventory room
- **Evaluate and contain overall printing costs**
 - Automatic meter reading for tracking overall usage and costs
 - Toner and service inclusive agreement to eliminate extra overhead costs
 - Monthly usage report for cost analysis

THE RESULT

- **Substantial cost savings**
 - Reduced printing costs by 30 to 35 per cent
- **Managed and efficient printing environment**
 - Greater visibility of overall printing volumes and costs for better decision making
 - Reduced service call and service response time - down to four hours
 - Eliminated workload of administration area in purchasing and managing toners
- **Greener printing environment**
 - Divert more print cartridges and drums away from landfill
