

## Lexmark X792de Colour Laser Multifunction Printer

Lexmark recently announced the introduction of a new range of colour laser single function and multifunction printers. One notable model from this range is the X792de multifunction printer which brings workgroup productivity to new heights with exceptional multifunction (print/copy/scan/fax) performance and productivity solutions. Featuring an intuitive, smartphone-like colour touch screen panel, the X792de enables users to access and manage their documents faster and with greater flexibility. At 10.2 inches, the touch screen is the largest in its class displaying big colourful icons that intuitively guide the user in achieving workflows or tasks more efficiently.

Advanced Print Preview features provide a thumbnail preview for selectable print jobs. Users can check to see if they have the correct job or choose certain pages to print. The user can even change settings to a job after it has been sent to the printer. These changes could include choosing to print double-sided or add finishing touches such as hole punch, staple, or collate via Finishing options available for this model. The X792de is the only device in its class<sup>1</sup> to offer hole punch finishing capability.

At 50 pages per minute, the X792de features the fastest print and copy speeds in its category (defined as A4 colour laser MFPs with U.S. street prices between \$3,000 to \$5,000 that have a base model and print speeds between 30-50 ppm). The X792de can also be configured with additional input/output options based on the needs of the workgroup. This flexibility, combined with vibrant colour printing, ease of use, and energy-saving features means workgroups can produce quality colour output in-house and reduce the time and costs associated with outsourcing jobs.

## Kyocera FS-3920DN

Kyocera is one of the world's largest manufacturers and leading providers of printer, copier and multifunctional imaging systems. The FS-3920DN is a single function mono laser printer by Kyocera which has proven to be a popular work horse in the Australian education sector. According to David Finn, Managing Director Kyocera Mita Australia and New Zealand, its education customers demand value for money and a printer that delivers high quality output, with minimal maintenance, paper jams and service issues.

The award winning FS-3920DN certainly delivers this and more. By incorporating Kyocera's ECOSYS technology, with its long life components, it offers one of the lowest Total Cost of Ownership (TCO) price points in the market while improving the printer's environmental impact at the same time. The FS-3920DN's long life drum is guaranteed for 300,000 pages, which equates to around three to five years of regular usage. This virtually eliminates the need for replacement of the drum and other cartridge components – a task which is typically performed many times over the life of a competitor's printer.

Once using this product, you will discover other easy to use features like the quick and simple toner replacement and the optional paper feeders and envelope feeders which are available in addition to the standard features of automatic duplex, network interface and 600 sheet paper input. This highly efficient printer is ideally suited for organisations demanding fast, 40 page per minute output with first class productivity, outstanding features, at a low cost per page.
